Door Safety Device Type A  
Used for Bi-Parting Doors

Door Safety Device Type B  
Used for Slide-Up Doors and all Car Gates
In the fully closed position, remove the top guide shoe on one side of the shoe angle and slide the DSD onto the rail.

If the shoe angle does not have mounting holes, locate the DSD housing on the shoe angle (check for interference in a fully open position), mark the three mounting holes, drill hole øF (.257”; 6.7mm) and top with 5/16-18 UNC or M8. Fasten the DSD to the shoe angle.
Fasten the DSD to the shoe angle using 5/16-18 screws (HSCS) provided or [M8 x 40mm]

Adjust the Pivot Arm to fully rest on the door chain surface
1. Door Guide Rail

2. The Safety Cam should not interfere with the door rail.

Re-Attach guide shoe to upper panel.
Repeat the same procedure for the other door panel.
Fasten the DSD to the shoe angle using 5/16-18 screws (HSCS) provided or [M8 x 40mm]. If the shoe angle does not have mounting holes, locate the housing on the shoe angle (check for interference with the chain rod holder), mark the three mounting holes, drill hole #F (.257" or 6.7mm) and top with 5/16-18 UNC or M8. Fasten the DSD to the shoe angle.

If the shoe angle does not have mounting holes, locate the DSD housing on the shoe angle (check for interference in a fully open position), mark the three mounting holes, drill hole #F (.257"; 6.7mm) and top with 5/16-18 UNC or M8. Fasten the DSD to the shoe angle.

Remove the both guide shoes from the side of the lower door panel opposite to the side where DSD is being installed. Move the door toward the side without the guide shoes and slide the DSD onto the rail.
Safety Cam - Type B

1. Top Sleeve
   Tension Screw
   Lock Nut
   Cable

2. Re-Attach guide shoe to upper panel.

3. The Safety Cam should not interfere with the door rail

4. Repeat the same procedure for the other door panel

With the tension screw in the lower position, slide the cable through the screw. Secure the end of the cable by placing the cable stop (loop) sleeve on the cable (use crimping tools). Put tension on the cable by turning the tension screw up. Lock the tension screw in position using lock nut.
